

## SAVINGS AND ENERGY EFFICIENCY

SNF ITALIA SRL at the Varedo site in Via Vittorio Emanuele Orlando 32 in the province of Monza and Brianza is equipped with a photovoltaic system with a production capacity of 104 KW.

This allows us to be completely autonomous in the production and consumption of electricity through renewable sources and not to use any other energy source such as gas and diesel.

70% of the energy produced is used for standard site management, while the remainder is fed back into the network.

From September 2021 a column has been set up for charging Hybrid or Full Electric vehicles.
